Installation and Removal of Vanity Drawers

How to remove the vanity drawer:

STEP 1

Pull out the black button on the two sides of the sliders at the bottom of the drawer at the same time.

STEP 2

Lift the drawer to remove the drawer.

The removal is now complete.

How to install the vanity drawer:

Step 1. Pull the slider out of the vanity and put the slider on the drawer in alignment with the slider on the vanity.

Step 2. Insert the iron hook into the side board of the drawer as in picture 2.

Step 3. Make sure that the metal button is inserted into the pre-drilled holes under the drawer panel as in picture 3.

Step 4. Press the black button on the two sides of the sliders at the same time and push down on the drawer. Installation is now complete.

Note: When pressing down the drawer, apply pressure in the middle of the drawer to ensure both sides of the drawer are properly inserted into the rails. Failure to do so could stop the drawer from opening.

How to Troubleshoot a Drawer That Will Not Close Properly

Step 1. Make sure the metal hooks on the sliders are properly inserted into the pre-drilled holes on both sides of drawer.

Step 2. Make sure the metal button shown in the yellow circle is properly inserted into the pre-drilled holes under the drawer panel.

Step 3. Check if the rebound device is in good condition. If rebound device has separated from the slider, then the slider must be replaced.
